TOP SECRET

The Spy Gear Lazer Tripwire is the ultimate security system. It is important that you practice operating this advanced equipment before you use the gear on a real mission.

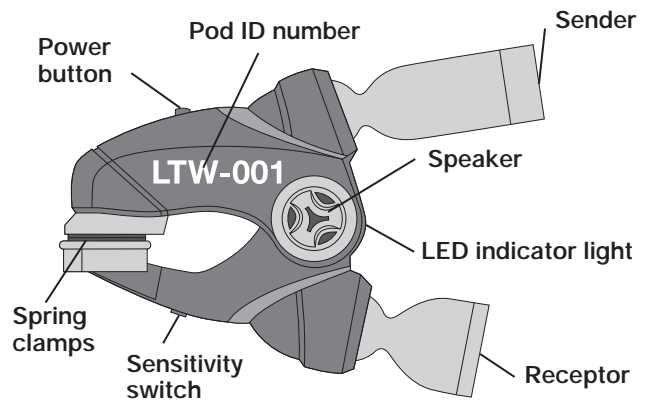

One slip up on a mission may jeopardize our whole organization!

Lazer Tripwire works best in dim to dark places—which is where top-secret security systems are needed most!

Exercise One: Know your equipment

Identify pods LTW-001, LTW-002 and LTW-003. The ID number is located on the side of each pod.

IMPORTANT: LTW-001 is the main pod and controls the whole system. LTW-001 is the only pod that can tell you when the system is armed. Do not allow this pod to fall into enemy hands!

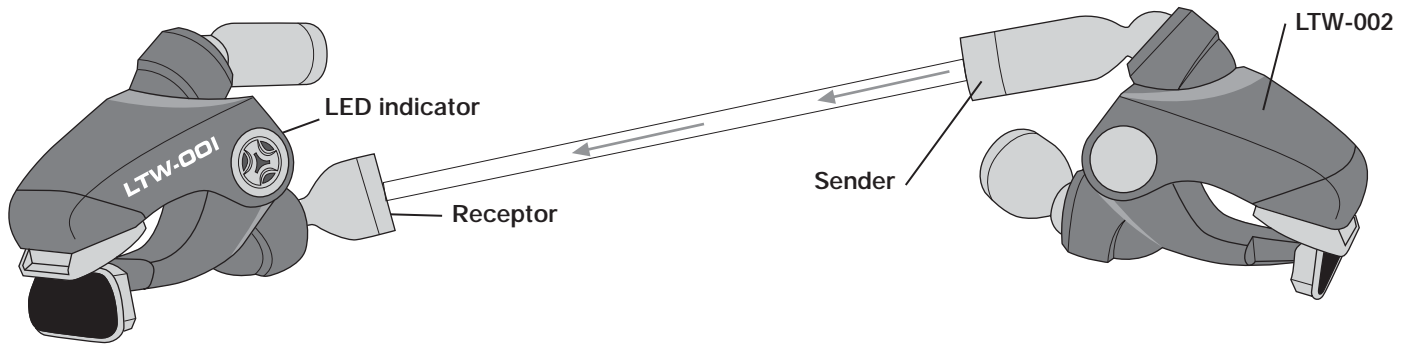

Exercise Two: Simple set up

Practice creating a simple trap. Then use the trap to protect things, like important documents or other Spy Gear.

- STEP 1** Make sure you are in a dimly lit room.
- STEP 2** Stand LTW-001 and LTW-002 on a table, facing each other about 12 inches apart.
- STEP 3** Set the sensitivity switch on both pods to the brighter setting (☀).
- STEP 4** Switch both pods on.
- STEP 5** Shine the light beam from LTW-002 Sender into the center of LTW-001 Receptor. The solid red LED indicator will light on LTW-001 when the beam is lined up.

TIP: If you cannot find the beam from LTW-002 Sender, place a piece of white paper in front of the sender to locate the beam's position.

- STEP 6** Wait five seconds for the system to arm. When armed, LTW-001's LED will begin blinking, and a voice will announce "SYSTEM ARMED".
- STEP 7** Move your hand through the beam slowly to test the alarm.

CONFIDENTIAL
